# Seattle/King County CDL Recycling Directory

## Introduction and Definitions

The information in this guide will help you **save money!** Cut costs on your construction, remodeling or demolition project by **recycling** and **reusing materials** at job-sites. This guide includes:

- Definition of terms
- Setting up a job-site recycling program
- Quick guide to area recyclers
- Directory of area recyclers and reuse opportunities
- Listings of King County and Seattle disposal facilities

## Questions?

- **In King County** call the King County Solid Waste Division at (206) 296-4466 or the King County Construction, Demolition and Landclearing (CDL) program at (206) 296-4407. You may also find answers to commonly asked questions on King County's website at [www.metrokc.gov/dnr/swd/recycomp/cdl2.htm](http://www.metrokc.gov/dnr/swd/recycomp/cdl2.htm)
- **In Seattle** call the Business and Industry Recycling Venture hotline at (206) 389-7304. You may also find this information on their website: [www.seattlechamber.com/birv](http://www.seattlechamber.com/birv)

## Definition of terms

- **CDL** - The acronym CDL will be used throughout this guide. It stands for **C**onstruction, **D**emolition and **L**andclearing material generated at job-sites.
- **Construction material**: Wood, concrete, drywall, masonry, roofing, siding, structural metal, wire, insulation and other building materials found at construction sites.
- **Demolition material**: Concrete, asphalt, drywall, carpet, wood, masonry, roofing, siding, structural metal, wire, insulation and other materials found in demolished buildings, roads and other structures.
- **Landclearing material**: Natural vegetation and minerals such as stumps, brush, blackberry vines, tree branches, associated dirt and sand, tree bark, sod and rocks.
- **Source separated**: CDL materials that are separated from other waste and planned for recycling.
- **Mixed CDL waste**: Contains both recyclable and non-recyclable CDL waste material that has not been separated. Recycling opportunities are limited for mixed loads of CDL.

## Case Study: Earthwise

### Hand Demolition Enables Nearly 75% of a Mercer Island Residence to be Salvaged or Recycled

Earthwise, Inc. saved over \$9,000 by salvaging and recycling materials from the demolition of a 5,300 sq. ft. home.

#### Material Salvaged

- 18 tons of lumber
- Lighting fixtures
- Cabinetry, library shelving and paneling
- 1 ton of siding and trim
- Stairwell
- Existing landscape was left intact, another benefit of hand demolition

- Plumbing fixtures
- All doors and windows
- Marble mantle

#### Material Recycled

- 19 tons of wood (flooring, cedar shakes)
- 7 tons of metal (heating system, ductwork)
- 170 tons of concrete

# Setting Up A Job-Site Recycling Program

---

Rising landfill fees have made disposal of construction, demolition and landclearing waste a significant expense. Reducing the amount of this material going for disposal lowers the cost of doing business.

## Identify Recyclables

Asphalt, concrete, cardboard, drywall, metals and wood are easy to recycle in King County. Recycling options also exist for asphalt roofing, fluorescent lighting and carpet padding.

## Choose a Recycling Method:

There are three basic approaches to job-site recycling.

❶ **Contract with a hauler** to transport materials to a recycler: There are two options here:

- Contract with the garbage hauler for the site to provide containers and hauling of both recyclables and garbage.
- Contract with a recycling hauler to provide container rental and hauling services. (If you choose this option, you may still need regular garbage service.)

❷ **Contract with a construction clean-up service** that comes on site and picks up recyclables and garbage that are collected in piles or containers. Materials are then taken to an appropriate recycling or disposal facility.

❸ **Self-haul.** Collect recyclable materials in piles or special containers at the job-site and haul them yourself to local processors and recycling drop-off facilities.

A combination of methods, such as self-hauling wood and contracting with a drywall recycler to provide a container and hauling services may be the best option for your project.

## Select A Recycler

Specify in an agreement with the recycling service provider:

- What materials will be recycled
- Costs associated with the service (fees for container rental, hauling, recycling charges)
- Requirement that weight or volume of recyclables be documented
- Requirement that material will go to a properly permitted facility
- Schedule for picking up containers
- How recycling containers will be labeled

## Involve Subcontractors

- Include language in sub-contractor agreements that they will recycle
- Discuss the recycling program at every safety meeting or other regular meetings

## Monitor the Program

- Check dumpsters regularly to make sure material is getting separated properly

## Determine Savings

- Calculate the cost savings from recycling versus disposal using documentation from your hauler.

## For More Information on Preventing Waste and Recycling on the Job-site

*The Contractors' Guide to Preventing Waste and Recycling*, a companion to this *Construction Recycling Directory*, includes information on:

- Preventing Waste in the First Place
- Setting Up a Job-Site Recycling Program
- Making Your Program Work
- Designing Waste Management Plans and Specifications
- Using Recycled Content Building Materials
- Are There Dollars in Your Dumpster? – worksheets to calculate cost effectiveness of recycling

## Case Study: Lease Crutcher Lewis

### Kentlake High School Recycles 60%, Saves \$16,500

A new 250,000 square-foot high school built by Lease, Crutcher, Lewis for the Kent School District recycled tons of materials and closed-the-loop by using recycled-content building materials.

#### Recycling Program Highlights

- Cost savings: \$16,500
- 664 tons recycled

#### Materials Recycled

- 86 tons of wood
- 10 tons of cardboard
- 150 tons of CMU's and concrete
- 15 tons of misc. metals
- 135 tons of drywall

#### Recycled Content Material Used

- 1,500 tons of recycled asphalt
- 12 tons of recycled carpet in wheel stops
- 142 tons of recycled tires in astro turf
- 35 tons of recycled gypsum in drywall

#### Sustainable Building Practices

Dozens of trees and shrubs were salvaged at the site and used by King County. Durable, aesthetically appealing materials were chosen for the project, such as a blend of brick and a two-tone concrete block for walls.

## Where is Your Job-site Material Going?

King County and the City of Seattle require CDL materials be taken to properly permitted facilities. This applies to recycling and disposal. Permitted facilities comply with state and local regulations for material handling, operational and environmental controls and are inspected and monitored by regulatory agencies. To ensure your job-site material is being handled properly and not ending up in an illegal dump site, verify that it's going to a permitted facility.
